Title & Statutory Disclaimer

FOODIQ INSTITUTIONAL CORPORATE RESEARCH · INDIA CONSUMER INTERNET DUOPOLY
Comprehensive comparative financial intelligence, unit economics, management credibility, econometric validation, and multi-segment scenario simulation for Eternal Limited (Zomato/Blinkit) and Swiggy Limited (Instamart/Food Delivery).

Statutory Note: This document is prepared exclusively for professional financial research and competitive analysis. All factual observations are derived from primary corporate disclosures filed with the Registrar of Companies and Securities and Exchange Board of India (SEBI). This report does not constitute investment advice.

Research Parameters & Database Coverage

Reporting Horizon: Q1 FY25 through Q2FY27. Authoritative Database: data/foodiq.db.

Parameter	Scope
Primary Companies	Eternal Limited, Swiggy Limited
Business Segments	Food Delivery, Quick Commerce, Out-of-Home, B2B Supplies
Reporting Cutoff	Q2FY27
Database Records	570 verified quarterly metric observations
Filing Archive	14 primary statutory disclosures and shareholder letters

Executive Summary

India's consumer-internet food and delivery ecosystem exhibits strong top-line scale alongside divergent operational economics. Eternal's Quick Commerce arm (Blinkit) has pulled decisively ahead in store network throughput, generating ₹849,924 / store-day

(+22.0% growth since Q1 FY25) across 2,700 stores guided for FY27. In contrast, Swiggy Instamart has expanded AOV from ₹498 to ₹708 while contribution margins improved from -3.2% to -1.0%. Econometric testing reveals that synchronous quarter-on-quarter AOV jumps do not directly drive same-quarter margin turnaround (detrended r_delta = 0.1399, p = 0.72); rather, store vintage maturation and network density are the dominant drivers of economic break-even.

Key Verified Research Findings

Core findings established and verified through Phase 3 and Phase 3.1 independent audit:

Finding ID	Title	Evidence Tier	Core Insight
FINDING-001	Blinkit Store Expansion vs. Store-Level Throughput Maturation	DERIVED FACT	Throughput per store-day = NOV * 10^7 / (Period-End Stores * 91.25). In Q1 FY25, Blinkit Net Order Value (NOV) was ₹4,061.0 Cr across 639 period-end dark stores, yielding an average throughput of ₹696,465 (~₹6.96 lakh) per store-day. By Q2 FY27, dark stores quadrupled (+322.5% to 2,700 stores) while NOV expanded to ₹20,940.0 Cr (+415.6%), driving average throughput up to ₹849,924 (~₹8.50 lakh) per store-day (+22.0% throughput expansion). [AUDIT NOTE: Prior preliminary drafts erroneously plugged in Swiggy Instamart's GOV of ₹2,724 Cr and ₹9,230 Cr into Blinkit's throughput formula, generating a spurious -20% contraction. Using Blinkit's true disclosed NOV demonstrates robust +22.0% throughput expansion despite massive store footprint scaling].
FINDING-002	Instamart vs. Blinkit Network Productivity & Denominator Distortion	DERIVED FACT	Swiggy reports orders/store/day using internal ACTIVE STORE-DAYS (1,143 orders/store-day). Dividing reported quarterly orders (130.3 mn) by period-end closing stores (1,240 * 91.25) yields 1,151 orders/store-day. Blinkit's order count is undisclosed, preventing direct orders/store-day peer comparison.
FINDING-003	Food Delivery Monetisation Asymmetry	REPORTED FACT	Eternal defines Take Rate as (Adjusted Revenue / GOV) ~20.2%. Swiggy discloses total Take Rate (commissions, customer

Finding ID	Title	Evidence Tier	Core Insight
	and Comparable Scope		delivery charges, and advertising) at ~24.0% of GOV. Swiggy headline monetization appears ~380 bps higher on raw disclosed figures.
FINDING-004	Quick Commerce Contribution Margin Expansion vs. Per-Order Economics	DERIVED FACT	Swiggy Instamart Contribution Margin expanded from -4.5% in Q1 FY25 to -1.0% in Q2 FY27 (+350 bps expansion). Over the same period, AOV expanded from ₹487 to ₹708 (+₹221, +45%). Contribution loss per order contracted from -₹21.92 to -₹7.08 per order (saving ₹14.84 per order).
FINDING-005	Inorganic Scope Distortion: District Acquisition & 1P Inventory Shifts	REPORTED FACT	1. In District (Q2 FY25), inorganic acquisition contributed ~118 percentage points of the 171% headline YoY growth. 2. In Blinkit (Q2 FY26), reported revenue leaped from ₹1,061 Cr to ₹2,423 Cr (+128% QoQ), while underlying NOV grew 24.2% QoQ.
FINDING-006	Profitability Gap Trajectory Across Food Delivery & Quick Commerce	DERIVED FACT	In Food Delivery, the Adjusted EBITDA margin spread between Eternal and Swiggy contracted from 315 bps in Q1 FY25 to 242 bps in Q2 FY27. Swiggy expanded Food EBITDA margin by +260 bps (from 0.8% to 3.4%) while Eternal expanded by +187 bps.

Competitive Positioning & Margin Spread Attribution

In Food Delivery, the Adjusted EBITDA margin spread between Eternal and Swiggy stood at 242 bps in Q2 FY27. Under the 4-tier comparability framework, Food Delivery Adjusted EBITDA is classified as LEVEL 3 (Directionally Comparable). Eternal excludes corporate overhead allocations and share-based payment expenses (ESOP), whereas Swiggy includes shared corporate expenses in segment reporting. In Quick Commerce, direct revenue comparison is BLOCKED under LEVEL 4 rules following Blinkit's transition to a 1P merchant-of-record model in Q2 FY26.

Management Execution & Credibility Scorecards

Commitments evaluated across 16 categories using a 7-tier delivery taxonomy. Pending multi-year commitments (e.g. Swiggy IPO prospectus targets for FY28) are strictly isolated

in the evaluable denominator, preventing unexpired timelines from biasing historical delivery rates.

Company	Total Tracked	Evaluable Completed	Strict Delivery Rate (%)	Broad Delivery Rate (%)	Pending Multi-Year
Eternal Limited	8	6	83.33%	91.67%	2
Swiggy Limited	18	4	75.00%	87.50%	11
